PROFESSIONAL SUMMARY

Professional with practical experience in software development, microservices architecture, and frontend development. I have collaborated on projects with modern Full-Stack technologies throughout the entire software lifecycle; from data modeling (SQL, NoSQL), integration and consumption of REST APIs, building functional user-oriented interfaces, to deployment in Cloud environments (AWS, Docker). Oriented toward problem-solving, continuous learning, teamwork with agile methodologies (Kanban, Scrum), and best practices in development (Git, Testing, CI/CD). Motivated to learn and enhance my professional growth, contributing value to scalable and high-impact projects.

WORK EXPERIENCE

Web Developer – Thesis Project

Aug 2024 – Jul 2025

University of Santiago of Chile, Chile

- Led the design and development of a scalable SaaS-type CMS platform, aimed at facilitating the creation of customized web applications by non-technical users.
- Integrated the backend (NestJS, Node.js) based on a microservices architecture (REST APIs), adding new CMS configuration endpoints.
- Implemented the frontend (React) based on a microfrontends architecture (module federation webpack 5) in a maintainable and scalable manner.
- Redesigned the NoSQL database model (MongoDB) with a dynamic and long-term maintainable approach.
- Managed deployment in Cloud environments with Docker (Docker Compose) and administered the software lifecycle through Git version control (GitHub, CI/CD).
- Reduced implementation time for new systems by 90% through automation of initial configuration processes.
- Decreased development effort for new features by 60% by identifying core functionalities and specific ones for each new system.

IT Intern

Jan 2025 – Feb 2025

Comercializadora de Trigo S.A., Chile

- Optimized technology platforms through development and maintenance of modules in Django (MVC).
- Led the design and development of an institutional video repository, achieving centralization of audiovisual material and enabling public access.
- Redesigned the user interface and navigation flow of the Complaints Channel, reducing critical information search time by 25%.
- Managed SQL databases (MySQL, PostgreSQL) and administered servers to ensure operational continuity.
- Applied best practices in information security (ISO 27001 standard).
- Systematized documentation of technology incidents through continuous improvement processes for efficient technical problem resolution.

UX Assistant

Aug 2024 – Dec 2024

University of Santiago of Chile, Chile

- Collaborated in the implementation of practical workshops and the final course project, applying user-centered and agile methodologies (Kanban, Scrum).

- Supported formative assessments of critical milestones, providing iterative feedback to improve the learning curve by 25%.
- Led the analysis of educational software and the elaboration of technical documentation (user manuals).
- Reduced technical load of software tools by 80% so the team could meet pedagogical objectives without technological blockages.
- Improved accessibility to academic material by 35% (Google Sites, Google Drive, GitHub), optimizing structure and usability of digital resources.

EDUCATION

Bachelor of Science in Computer Engineering (Graduated)

Mar 2018 – Jul 2025

University of Santiago of Chile, Chile

Relevant coursework: Database Workshop, Software Engineering Workshop, User Experience UX, Distributed Systems.

LANGUAGES

- Spanish (native)
- English (intermediate)

TECHNICAL SKILLS

- **Languages:** JavaScript (advanced), TypeScript (advanced), Python (intermediate)
- **Frontend:** HTML5 (expert), CSS3 (advanced), React (advanced), Bootstrap (intermediate)
- **Backend:** Node.js (intermediate), NestJS (intermediate), Django (intermediate)
- **Databases:** MongoDB (advanced), MySQL (advanced), PostgreSQL (advanced)
- **DevOps and Tools:** Git (expert), GitHub (advanced), Linux (intermediate), Docker (basic), AWS (basic), CI/CD (familiar)
- **Design and UX:** Figma (basic)
- **Agile Methodologies:** Kanban (expert), Scrum (intermediate)

STRENGTHS

- Problem-solving
- Analytical thinking
- Planning and organization
- Results-oriented
- Prudence
- Research
