

CARLOS CASTILLO DOMÍNGUEZ

Software Engineer

+56 9 9812 2331 · carlos.castillo.d@usach.cl · linkedin.com/in/carlos-castillo-d

PROFESSIONAL PROFILE

Professional with practical experience in software development, microservices architecture, frontend development, and process automation. Collaborated on software projects using modern Full-Stack technologies; from data modeling (SQL / NoSQL), integration and consumption of REST APIs, building functional and responsive interfaces, to deployment in Cloud and Docker environments. Focused on problem-solving, continuous learning, teamwork with agile methodologies (Kanban, Scrum), and development best practices (Testing, Documentation, Git). Motivated to learn and enhance my professional growth, contributing value to scalable and high-impact projects.

EXPERIENCE

Web Developer – Title Project

Aug 2024 – Jul 2025

University of Santiago, Chile

- Led the design and development of a scalable SaaS-type CMS platform, facilitating the creation of personalized meeting websites by non-technical users.
- The CMS was built with TypeScript, based on microfrontends (React) and integrating a REST API built with microservices (NestJS, Node.js), focused on domains and user-oriented.
- Redesigned the NoSQL data model (MongoDB) with a dynamic and long-term maintainable approach.
- Managed deployment in Cloud environments (Virtual Machine) with Docker (Docker Compose) controlled with GitHub (Git, CI/CD, SonarQube).
- Reduced implementation time for new systems by 90%, automating creation for 3 meeting systems.
- Decreased development effort for new meeting features by 60%.

Information Technology Services Intern - IT

Jan 2025 – Feb 2025

Comercializadora de Trigo S.A., Chile

- Supported the maintenance of the company website (Django, Python), using the MVC pattern.
- Led the development of a new company video repository, achieving centralized audiovisual material and enabling public access.
- Redesigned the user interface and navigation flow of the Whistleblower Channel, increasing critical complaint information visibility by 30%.
- Resolved incidents in the SQL database (MySQL) of the company logistics system, ensuring operational continuity.
- Resolved requirements from the company support system through documentation processes and continuous improvement.

User Experience Assistant – UX

Aug 2024 – Dec 2024

University of Santiago, Chile

- Collaborated in the implementation of practical workshops and the final course project in a work team, using Scrum.
- Supported the evaluation of the final project in iterative milestones, providing critical feedback and improvement in students' learning curve.
- Improved access to academic material across different resources (Google Sites, Google Drive, GitHub).
- Led the analysis of modular architecture educational software for the course and the elaboration of

technical documentation (user manuals), reducing the technical burden on students.

Software Engineer – Computer Engineering Project

Aug 2023 – Dec 2023

University of Santiago, Chile

- Participated in the development of a desktop document management application, using advanced Python libraries and the MVC pattern, from local PDF documents and in the cloud (Google Drive).
- Collaborated in the implementation of an advanced search engine (using NLTK and PyPDF), achieving reduced search time for disorganized documents.
- Collaborated in the implementation of a document classifier (using Scikit-Learn), using criteria of date, language, and topics, achieving automated organization.
- Supported the implementation of an AI chatbot (using OpenAI), achieving systematization of information in documents.

Frontend Developer – Software Engineering Workshop

Mar 2023 – Jul 2023

University of Santiago, Chile

- Collaborated in the development of a web application to automate course management and simulation exercises on integers on a number line.
- Supported the creation of metaphors for better understanding in simulated exercises.
- Developed the user interface (Vue.js) of the entire system.
- Integrated and consumed a REST API (Spring Boot) connected to an SQL database (PostgreSQL).
- Reduced teacher workload by 30% in automated exercise generation.

EDUCATION

B.Sc. in Computer Engineering (Graduated)

Mar 2018 – Jul 2025

University of Santiago, Chile

Relevant courses: Software Engineering Workshop, Computer Engineering Project, User Experience UX.

LANGUAGES

- Spanish (native)
- English (intermediate)

TECHNICAL SKILLS

- **Languages:** JavaScript (advanced), TypeScript (advanced), Python (intermediate)
- **Frontend:** HTML5 (expert), CSS3 (advanced), React (advanced), Vue.js (intermediate), Bootstrap (intermediate)
- **Backend:** Node.js (intermediate), NestJS (intermediate), Django (intermediate), Spring Boot (basic)
- **Databases:** MongoDB (advanced), MySQL (advanced), PostgreSQL (advanced)
- **DevOps and Tools:** Git (expert), GitHub (advanced), Linux (intermediate), Docker (basic), Cloud / AWS (basic), CI/CD (familiar), Trello (familiar), Jira (familiar).
- **Design and UX:** Figma (basic)
- **Agile Methodologies:** Kanban (expert), Scrum (intermediate)
